

Read left to right, then down

Program → weeks → days → parts (sessions) → Gym/Home options → a Workout clone → ordered lines → one library Exercise. Prescription lives on the line, not the exercise name.

Rules the boxes do not say

- Workout.name is a content title (Fasted cardio, Lower body). Day number and Gym/Home live on ProgramDay / Option.
- Template paste always clones. Do not share one Workout row across days or Tuesday's edit changes Thursday.
- ProgramDay.workoutId is legacy. Members resolve through ProgramDayOption.workoutId for their trainingLocation.
- WorkoutExercise.notes is today's cue. Exercise.description / videoUrl is the library catalog.
- Adult weekNumber is absolute. phaseWeekNumber is week-in-phase. WorkoutLog = session; ExercisePerformance = silhouette.

Cardinality, keys, and delete behavior

What the foreign keys do when a coach deletes a day, workout, or program

Parent → child	Card.	On delete	Meaning
Program → ProgramWeek / MacroPhase / Enrollment	1 : N	Cascade	Removing a program removes its calendar and enrollments.
ProgramWeek → ProgramDay	1 : N	Cascade	A week owns Mon–Sun (dayNumber 1–7).
ProgramDay → ProgramDaySession / Option	1 : N	Cascade	Parts and Gym/Home tracks die with the day. The Workout row is kept.
ProgramDaySession → ProgramDayOption	1 : N	Cascade	Gym vs Home are options under a part, not separate parts.
ProgramDayOption → Workout	N : 1	Restrict (no cascade)	Many options may point at one workout; prefer one clone per option.
ProgramDay → Workout (legacy workoutId)	N : 0..1	Set-null / keep	Old default pointer. New code reads options first.
Workout → WorkoutExercise	1 : N	Cascade	Deleting a workout deletes its lines.
Exercise → WorkoutExercise	1 : N	Restrict	Archive the exercise instead of delete if lines still reference it.
WorkoutExercise → WorkoutSetPhase	1 : N	Cascade	HOLD / REPS / BURNOUT / TIMED inside one working set.
Workout → WorkoutTemplate	1 : 0..1	Cascade from workout	Library card. Paste clones the workout; it never shares the row.
Workout → WorkoutLog	1 : N	Keep log	Member history stays even if the program day is rebuilt.
Exercise → ExercisePerformance	1 : N	Cascade	Per-move silhouette (weight / sets) for the next visit.
WorkoutCycle → Day → Slot → Workout	1 : N : N : 1	Cascade cycle only	Optional 28-day library (M1D1–M1D28), parallel to ProgramWeek.
User → ProgramEnrollment	1 : N	Cascade	programStartDate + blockEndsAt define the paid 28-day window.
